

Using Windows Credential Manager (for Vista users only)

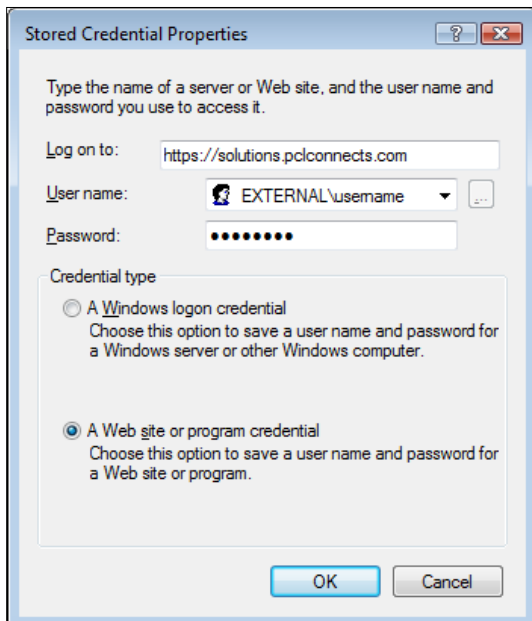

Credentials Manager gives you the option of storing a username and password on your workstation. This means you do not have to constantly enter user credentials to log in to PDC.

To use the Credentials Manager:

1. **Start > Control Panel > User Accounts**
2. Select 'Manage your network passwords'.
3. In the **Stored User Names and Passwords** window, select "Add".

4. Fill out the **Stored Credential Properties** window as shown in Figure 2.

5. Click "OK".
6. Click "Close" to finish the configuration.
